

MICROTAP SUPERCUT SPRAY

PRODUCT DATA

Revision Date: 10/25

Page 1 of 1

Product Description

Microtap Supercut HD Spray is a premium cutting fluid formulated from a sophisticated blend of lubricity additives to deliver exceptional performance. The aerosol's propellant enhances cooling, allowing for faster cutting and tapping. It can be safely used during machining and penetrates deeply into recessed areas, holes, slots, and other tight spaces, which results in a smoother, higher-quality finish.

Applications

Microtap Supercut HD Spray is a highly versatile cutting lubricant suitable for both soft metals like aluminium and brass, as well as harder materials, such as stainless steel. It's ideal for hard-to-reach or hard-to-lubricate areas, including internal pipe threading. In situations where a central coolant system isn't available, it offers a convenient spot application that can be used safely while machinery is operating.

- Extends tool life while enhancing surface finish
- Propellant provides additional cooling during operation
- Extreme pressure formulation accelerates cutting & tapping performance
- Adheres firmly at any angle, preventing drips & minimising waste

Typical Test Data

State	Aerosol
Colour	Off-white
Odour	Mild
Autoflammability	>230 °C
